RE: Comments on the Site 93 Operable Unit # 16, Final Feasibility Study, MCB  
Camp Lejeune, NC  
NC6170022580  
Jacksonville, Onslow County, North Carolina

Dear Mr. Hood:

The NC Superfund Section has received and reviewed the Final Feasibility Study for Site 93, Operable Unit #16, Camp Lejeune, MCB Superfund Site. The following comment is included for the Partnering Teams consideration.

**General Comment**

The States Comment #4 to the Draft Feasibility Study for Site 93 referring to the lack of clean wells (or geoprobes) on Figures in the FS to delineate the contaminated groundwater plume in the area of IS01, MW-10 were not included in the Final Feasibility Study.

State Comment #4

“If a clean well or geoprobe data exist upgradient of monitoring well MW10 as shown on Figure 2-7 please show it on one of the figures or make a note on Figure 2-7 stating that non-detect groundwater data has been collected upgradient of monitoring well MW-10. If no data exists, then the plume at this Site is not properly delineated and should be. At a minimum geoprobe or monitoring well data should be provided upgradient [**and side gradient**] of this area. Please clarify this important detail.”

Please provide a drawing or figure that provides the wells or probe locations as stated above and reference the same in the text where appropriate. Provide these insert pages before the ROD is written. If appropriate monitoring wells or groundwater probes do not exist to the southwest of IS01 or west of MW-10 this needs to be stated in a response letter and we will need to complete this work as part of the Remedial Design of the Remedy.
